

# TOR-Unveil: Forensic Analysis Report

## Chain of Custody

Report Generated:	2025-12-21 23:30:30 UTC
Analysis ID:	18a2a07a-0afe-4c44-a24d-a327672d776c
PCAP Filename:	tor_only.pcap
Analysis Duration:	18.79s
Case ID:	AUTO
Investigator:	System
Agency:	TN Police Cybercrime Division

## Executive Summary

This report presents the results of an automated TOR traffic analysis using the Flow Time-Density Correlation (FTDC) method. The analysis identified 20 potential guard nodes with an average confidence of 77.0%. The system analyzed network traffic patterns to probabilistically correlate TOR entry and exit nodes.

## Analysis Overview

Metric	Value
Total Guard Candidates	20
Average Confidence Score	77.0%
Improvement Factor	1.00x
Circuit Paths Identified	10
Correlation Trend	stable

## Top Guard Node Candidates

Rank	Nickname	IP Address	Country	Confidence	Flags
1	anarchistcook	179.43.159.78	XX	77.0%	
2	prsv	194.32.107.87	XX	77.0%	

3	9g4net3	185.184.70.225	XX	77.0%	
4	FTPhalifaxRWTH	137.226.34.45	XX	77.0%	
5	dreamachine	5.255.110.120	XX	77.0%	
6	GermanCraft29	152.53.251.244	XX	77.0%	
7	gembonggedhe	168.138.179.192	XX	77.0%	
8	Idotl	172.105.6.154	XX	77.0%	
9	edamame	172.235.36.209	XX	77.0%	
10	FreePearV6node0	204.197.163.238	XX	77.0%	

## Identified Circuit Paths

### Path 1 (Confidence: 77.0%)

Role	Nickname	IP	Country
Guard	anarchistcook	179.43.159.78	XX
Middle	lisdex	152.53.144.50	XX
Exit	lisdex	152.53.144.50	XX

### Path 2 (Confidence: 77.0%)

Role	Nickname	IP	Country
Guard	anarchistcook	179.43.159.78	XX
Middle	SharingIsCaring	188.195.48.170	XX
Exit	lisdex	152.53.144.50	XX

### Path 3 (Confidence: 77.0%)

Role	Nickname	IP	Country
Guard	anarchistcook	179.43.159.78	XX
Middle	seele	104.53.221.159	XX
Exit	lisdex	152.53.144.50	XX

### Path 4 (Confidence: 77.0%)

Role	Nickname	IP	Country
Guard	anarchistcook	179.43.159.78	XX
Middle	hubbabubbaABC	83.108.59.221	XX
Exit	lisdex	152.53.144.50	XX

### Path 5 (Confidence: 77.0%)

Role	Nickname	IP	Country
Guard	anarchistcook	179.43.159.78	XX
Middle	SENDNOOSEplz	204.137.14.106	XX
Exit	lisdex	152.53.144.50	XX

## Methodology

### Flow Time-Density Correlation (FTDC) Analysis

The analysis employs a multi-factor correlation approach:

1. **Temporal Correlation:** Compares timing patterns between exit node traffic and potential guard node activity using sliding window analysis (50ms default).
2. **Bandwidth Correlation:** Analyzes bandwidth capacity and utilization patterns to identify relays capable of handling observed traffic volumes.
3. **Circuit Pattern Matching:** Uses weighted scoring across three dimensions: - Bandwidth Score (50%): Relay capacity vs. required throughput - Quality Score (30%): Uptime, flags, and reliability metrics - Network Proximity (20%): Geographic and AS-level proximity analysis
4. **Iterative Improvement:** Bayesian-like updating mechanism that refines confidence scores as more correlation data becomes available.

#### Confidence Interpretation:

- High (>70%): Strong correlation evidence, prioritize for investigation
- Medium (40-70%): Moderate correlation, requires additional validation
- Low (<40%): Weak correlation, consider as background noise

## Legal and Technical Disclaimers

**IMPORTANT:** This report contains probabilistic correlation analysis results. The system does NOT:  
- Decrypt TOR traffic or compromise user anonymity through cryptographic attacks  
- Perform active network attacks or exploit vulnerabilities  
- Guarantee 100% accuracy in guard node identification

Results should be used as investigative leads requiring additional corroboration through traditional forensic methods. All analysis respects the integrity of the TOR network and is intended solely for lawful cybercrime investigation purposes.

**Chain of Custody:** This report was generated automatically by the TOR-Unveil system. Any manual modifications to this document invalidate its forensic integrity.
